

Environmental Check List

Some basic information greatly increases the quality of assistance which VEDP can provide as new businesses and industries go through the process of obtaining the environmental approvals they need to construct and operate their facilities. Please try to respond to the questions below as accurately as possible, remembering to quantify pollutant volumes, concentrations and/or mass in the units specified.

1. Will your process generate wastewater?
 - ? If yes, how much each day (gallons)?
 - ? What's in it?
Pollutants present, measured in milligrams per liter or parts per million
 - ? Do you plan to treat and discharge?
 - ? If no, what will you do with it?
Recycle?
Land apply?
Discharge to a municipal wastewater treatment plant (POTW)?

2. How much water will you require for your processes and other uses (gallons/ day)?
 - ? Are there any special quality needs?

3. Will any of your processes result in the emission of air pollutants?
 - ? What pollutants are in the emissions?
 - ? What is the estimated quantity of each pollutant in **tons per year**?
 - ? What are the sources of these pollutants?
 - ? What types of air pollution controls are being proposed?

4. Will any of your processes result in the generation of hazardous wastes?
 - ? How much?
 - ? Is it a listed hazardous waste?
 - ? Is it a characteristic hazardous waste?
 - ? Do you plan to treat or store it?

4. What is the SIC code for your industry?
